

# About the improvement of 5G environment in the subway station yard

~ 5G communication will be available at Tochomae Station on the Oedo Line ~

The Tokyo Municipal Transportation Bureau is actively utilizing digital technology to further improve convenience for our customers.

**For the first time in Japan, at Tochomae Station on the Oedo Line**, with the cooperation of JTOWER Inc., a 5G environment based on the "infrastructure sharing method" in which multiple carriers use the same antenna to emit radio waves. We would like to inform you that it has been maintained inside the subway station.

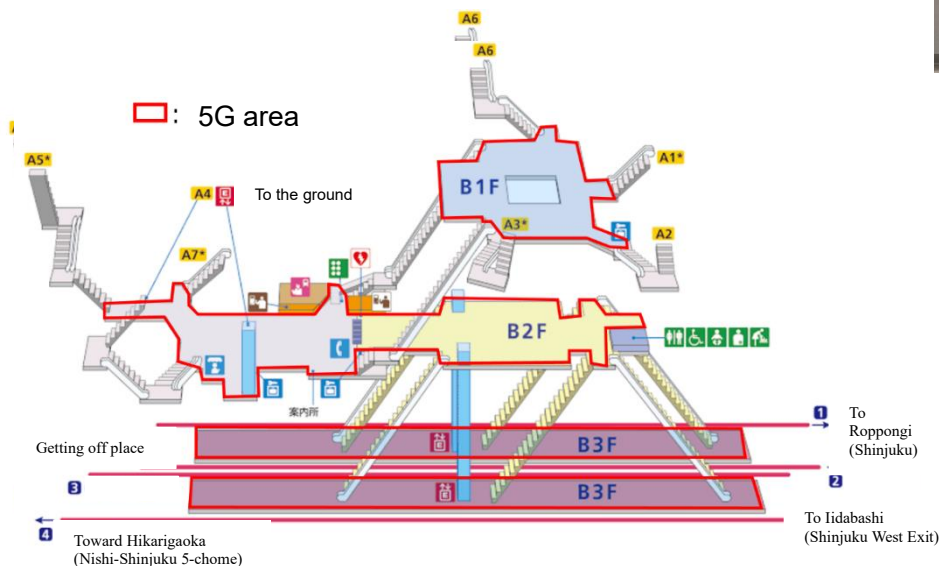

First of all, NTT DoCoMo Co., Ltd.'s 5G service will start on May 21st. We also plan to start services for other telecommunications carriers as soon as the environment is ready. Through this initiative, we will accumulate know-how on whether or not there is any impact on each device at subway stations and how to install antennas, and will play a leading role in expanding the 5G environment in the future.

## 1 Service starting date

Saturday, May 21, 4th year of Reiwa

## 2 Service available area

Oedo Line Tochomae Station Concourse and Home Floor

B2F concourse

\* 5G may not be available depending on the connection conditions.

## 3 Others

- This project is implemented based on the "Agreement on 5G Trial Maintenance and Verification Projects on the Tochomae Station yard on the Oedo Line" signed in August Reiwa 3<sup>rd</sup> year between the Metropolitan Transport Bureau Tokyo and JTOWER
- We will separately inform you when the services of other carriers will start.

### "Tokyo of the Future"

This is a business related to the "Tokyo of the Future" strategy.

- Strategy 10 Smart Tokyo
- TOKYO Data Highway Strategy

\*It is extremely dangerous to walk while using a smartphone inside a station, so please stop.
